McQ Inc. signs Basic Ordering Agreement to provide Unattended Ground Sensors (UGS) to Boeing for *SBI*net

Fredericksburg, VA –

McQ Inc. of Fredericksburg, Virginia has signed a Basic Ordering Agreement (BOA) with The Boeing Company. McQ was recently selected by Boeing as a source for UGS products in support of Boeing's *SBI*net Toolbox and this BOA sets forth the terms and conditions for the procurement of supplies and services in support of *SBI*net prime contract requirements.

McQ Inc.'s OmniSense CORE™ unattended ground sensor has the high performance target capabilities, long life, GPS, and Bluetooth local communications that its sister product OmniSense® has without the imaging capability. Each sensor has internal seismic and magnetic transducers with acoustic and passive IR as available options that can be added. OmniSense CORE™ is a networked sensor with two way communications and has local communications to cue OmniSense® Imagers. With very low power consumption, sensors are designed to last months in their environments.

McQ, headquartered in Fredericksburg, Virginia, is recognized as the high technology leader in remote surveillance, security and environmental monitoring products. Leading the way as the first company to develop integrated sensor and imagery technology for surveillance purposes, McQ is also the first to interface multiple sensors into a fully integrated communications and data network. With over 20 years of experience, McQ has earned a reputation for delivering rugged, state of the art surveillance and remote sensor systems for a wide range of commercial and government clients. McQ specializes in custom solutions on the cutting edge of sensor technology.
