### **McQ Inc. Awarded First Contract with The Boeing Company**

**Fredericksburg, VA** – McQ Inc. received its first contract with The Boeing Company under the defense contractor’s Basic Ordering Agreement (BOA) *SBI*net Toolbox contract to supply unattended ground sensors in the comprehensive effort to secure America’s northern and southern borders.

McQ develops sensing products that can detect people, vehicles and aircraft in remote areas. The company’s high-performance ground sensors can be left unattended and include target detection, long life, GPS, and network communications capabilities.

Each sensor has internal seismic and magnetic transducers with acoustic and passive infrared as available options that can be added.

“McQ is honored to be a part of the *SBI*net Toolbox and we believe our products will provide great support to The Boeing Company’s efforts to provide CBP with the technology solutions needed to secure our borders,” said John McQuiddy, President of McQ.

###

McQ, headquartered in Fredericksburg, Virginia, is recognized as the high technology leader in remote surveillance, security and environmental monitoring products. Leading the way as the first company to develop integrated sensor and imagery technology for surveillance purposes, McQ is also the first to interface multiple sensors into a fully integrated communications and data network. With 20 years of experience, McQ has earned a reputation for delivering rugged, state of the art surveillance and remote sensor systems for a wide range of commercial and government clients. McQ specializes in custom solutions on the cutting edge of sensor technology.
